

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1) (Currently amended) A liner for personal care products comprising a hydrophilic first ~~bedside~~ body-contacting apertured nonwoven layer laminated with a hydrophobic second apertured nonwoven layer.
- 2) (Previously presented) The liner of claim 1 wherein said the apertures of the first layer and the apertures of the second layer are aligned.
- 3) (Previously presented) The liner of claim 1 wherein said first layer comprises fibers with durable hydrophilicity.
- 4) (Previously presented) The liner of claim 1 wherein said second layer comprises fibers with non-durable hydrophilicity.
- 5) (Previously presented) The liner of claim 1 wherein said layers are laminated by a spunlace process.
- 6) (Previously presented) The liner of claim 1 further comprising a treatment applied to said hydrophilic first layer, said treatment selected from the group consisting of aloe, vitamin E, mineral oil, baking soda and combinations thereof.
- 7) (Currently amended) A liner for personal care products comprising a first ~~bedside~~ body-contacting nonwoven layer comprising staple, naturally hydrophilic fibers hydroentangled with a second nonwoven layer comprising hydrophobic fibers to form a laminate, wherein said laminate is apertured to produce apertures with an open area of 10 to 50 percent of ~~the total surface area~~ a total surface area of the laminate.
- 8) (Original) The liner of claim 7 wherein said first layer comprises hydrophilic fibers selected from the group consisting of rayon, pulp, cotton, naturally hydrophilic fibers, and mixtures thereof.
- 9) (Original) The liner of claim 7 wherein said second layer comprises hydrophobic fibers made from polymers selected from the group consisting of polyolefins, polyesters, acrylics and mixtures thereof.
- 10) (Previously presented) The liner of claim 7 wherein said laminate is apertured to produce apertures with an open area of 20 to 40 percent of the total surface area.
- 11) (Cancelled)

12) (Cancelled)

13) (Currently amended) A pantiliner comprising a liquid permeable liner, a liquid impervious baffle, and an absorbent core positioned therebetween, wherein said liner comprises a hydrophilic first ~~bedside~~ body-contacting apertured nonwoven layer laminated by a spunlace process with a hydrophobic second apertured nonwoven layer.

14) (Previously presented) The pantiliner of claim 13 wherein the apertures of the first layer and the apertures of the second layer are aligned.

15) (Currently amended) A process of making a liner for personal care products comprising hydroentangling a hydrophilic first ~~bedside~~ body-contacting nonwoven layer with a hydrophobic second nonwoven layer and aperturing said layers.

16) (Original) The process of claim 15 wherein said layers are apertured simultaneously to produce aligned apertures.
